1. All the requirements for the milestone 5 are successfully fulfilled.
2. An additional feature of salt hashing of password is been done
 - a. There are two users in the users database
 - i. Username : kkoushik9@gmail.com , Password: kkoushik9
 - ii. Username : serpina@uncc.edu , Password: serpina1
3. There are no issues that are to be resolved and the milestone is completed.
4. The easy part of this milestone is the user input validation while creating the new connection. And the difficult part was to validate the user which I overcame through some online resources.
